

## get ready:

- Insert the cross strut into the leading edge pockets.
- Make sure leading edge struts extend down to the ends of the leading edge sleeves.
- Attach the plastic hook on the flying line to the tow point on the bridle on the front of the kite.

## to fly:

Have a friend stand about 50 feet downwind from you and hold the kite with its nose pointed towards the sky. As the wind catches the kite, signal your friend to release it while you steadily pull in line until the kite is aloft. As the kite flies upward, slowly release more line.
