

# Telescoping Pole assembly instructions

## Step 1

Remove the endcap from the top of your Telescoping Pole. For ease of collapsing and storing your pole, do not lose this endcap. (diagram A)

## Step 2

Tilt the open end of the pole towards the ground and extend one section at a time by pulling until the base of each section is securely wedged into the top opening of the piece below it. (diagram B)

## Step 3

Attach your Premier product to the pole. Attach strings or swivels to the loop at the top of the pole to hold product in place. Note that banners will need to have the pole slid into the sleeve along the edge of the banner before tying the strings to the loop. Banners also have strings at the bottom of the sleeve that should be tied to the clip near the base of the pole.. (diagram C)

## Step 4

Drive a ground mount (not included in the pole packaging) into the ground. Remove the bottom Endcap from the pole and slide the pole over the ground mount. For ease of collapsing and storing your pole, do not lose this endcap. (diagram D)
